InnSeries windows version is a flexible and modular integrated suite of software applications designed to manage all aspects of a hospitality operation. It helps you to create the most customer friendly and well-managed operation.

The product offers point of sale billing, centralized reporting, cost control tools, materials management, restaurant and restaurant account management as various modules.

InnSeries Modules for Restaurants

InnTap	Point of Sale System
InnPalm	Palmtop Point of Sale System
InnControl	Food & Beverage Control System
InnMat	Materials Management System
InnLoyal	Loyalty Management system
InnHost	Hostess Node System

InnTap - Point of Sale System

InnTap is a sophisticated touch screen point of sale software, which allows various outlet to print order to their kitchen and keep track of each order even after it is settled.

Features :

- ▶ Table view with table status
- ▶ Multiple KOT printing to multiple kitchens
- ▶ Item selection through easy to select menu segregated into iconised menu-heads and sub-heads
- ▶ Split billing
- ▶ Shift based, till based cashiers scroll

InnPalm - Palmtop Point of Sale System

InnPalm is sophisticated palmtop software, which automates the process of order taking. This software enables captain/stewards to directly post clients order from a palmtop to various kitchen.

This hand held device software allows the user to operate all the functions, right from allocating the table to taking orders from the clients and then posting the KOT to the respective kitchens.

Features :

- ▶ Easy to use and handy
- ▶ Comprehensive functionality and access rights
- ▶ Seamlessly integrated with InnTap - Touch Screen Point of Sale System
- ▶ KOT printing of items to respective kitchens
- ▶ Reduce the traffic from restaurant to kitchen

InnControl - Food & Beverage Control System

InnControl takes care of complete food and beverage control from cost of ingredients to total consumption. It fully integrates with InnMat - Materials Management and InnTap - Point of Sale System; thus generating seamless flow of data for accurate controls.

Features :

- ▶ Maintain the full recipe of each and every dish on your menus.
- ▶ Give actual and standard cost of ingredients while entering recipes and get the recipe cost.

- ▶ Bifurcation of cost on the basis of food and beverage.
- ▶ Integrates with InnMat - Materials Management Systems for item cost and InnTap - Point of Sale for consumption of recipe.
- ▶ Interfaces with any other point of sale and materials management systems, if protocols are available.

Inn

- Loyalty Management System

InnLoyal is an easy-to-use, loyalty software which uses smart cards or magnetic cards to reward regular patrons. It also has Internet based, point checking system for each client. It is a powerful and compact software tool in the hands of the management that provides an efficient way of keeping track of members.

InnLoyal is an interactive system, that will help you build strong relationships with your members.

Features :

- ▶ Uses paper card, magnetic swipe card, smart card
- ▶ Maintains a comprehensive client profile
- ▶ Keep track of points earned by each client
- ▶ Checks point of every client over web
- ▶ Gift reimbursement module

InnHost - Hostess Node System

Hostess node is an easy to use solution provided to facilitate the hostess or reception of any fine-dining restaurant. It shows the restaurant layout as it is, so when a client requests for a quiet corner or a specific type of seating, tables can be assigned accordingly. It shows the current status of any table, so they can give informed information on wait times and reservations.

InnHost enables the reception / hostess to go about their business more efficiently without intruding onto their work.

Features :

- ▶ Shift wise restaurant layout with table status
- ▶ Comprehensive reservations system with option to lock table
- ▶ Call backs facility can be set some time before the reservation, if required. The reservation can be re-scheduled, if required.
- ▶ Option to take reservations for different outlets from the same node
- ▶ Comprehensive guest reporting to take care of compulsive no-shows, allowing for better planning of tables.

Mat - Materials Management System

InnMat provides inventory management analysis, purchase, receivables and stock accounting. It processes information relating to placing orders with vendors, receipt, inspection and issue of items through multiple stores for consumption or circulation.

InnMat provides better inventory management analysis.

Features :

- ▶ Items can have different units of measurement for purchasing, receiving, stocking and issuing with conversation rates
- ▶ Allows documents like various type of purchase order, including 'standing orders' with delivery schedules
- ▶ Detail and summary of stock ledger
- ▶ First In First Out accounting system
- ▶ Multi store processing

Inn
Loyal

InnTap - Web MIS

The restaurant MIS module gives you the facility to view the sales and collection reports of all your outlets in various parts of the world on single click.

This data is accessed over the internet through secured channels. It also incorporates the facility to allow selected documents, reports to be printed or exported to pdf format directly.

You can also put intra outlet news on this site to keep management people informed about the events held at various outlets.

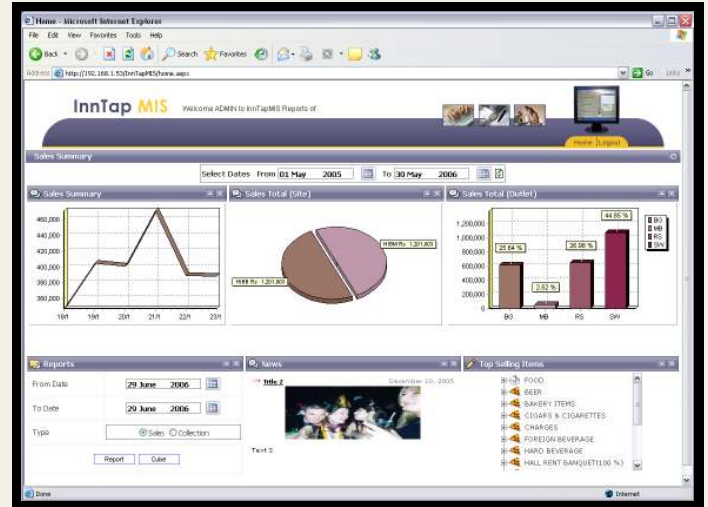

You can access all the necessary reports daily and regularly, without having to chase anyone.

InnTap MIS will give you that extra edge to analyse your business and hence make better decisions.

Features :

- ▶ Various charts for sales
- ▶ Sales summary – line chart, pie chart & bar chart
- ▶ Sales and collection reports

- ▶ User-definable MIS reports using OnLine Analysis and Processing (OLAP) tools
- ▶ Restaurant news

What our clients have to say

Having used competing products previously, I strongly feel ISG stands head & shoulders above the competition because of the quality of product, quality of service & the ability to listen to client's needs. The simplicity & ease of operation of InnTap & InnMat combined with the flexibility of creating your own reports makes it a very powerful tool.

The Kenilworth is a four star Hotel in Kolkatta. We are using ISG Software since 1993. Then the software was in DOS, now we are using the Windows version of ISG software for our Hotel. The users find it very user-friendly and stable, management is happy with the MIS, and we the systems people find it easy to maintain.
